

New Testing Service at MET!

Biological Safety Testing for Medical Devices

Medical Engineering Technologies Ltd are very pleased to announce that we are again offering biocompatibility testing as part of our range of support services for medical device manufacturers.

This service covers biological safety testing according to ISO 10993, consultancy on the testing required for CE Technical Files and FDA submissions, 510k and PMA. Testing is carried out in ISO 17025-accredited laboratories in Europe, thus eliminating the common problem of getting development products through non-EU customs. GLP studies are available according to FDA requirements.

Medical Engineering Technologies Ltd., 41 Seabrook Road, Hythe, Kent CT21 5LX, UK.
